About

As a Frontend Developer, I build performance-focused and scalable user interfaces using **React.js, Next.js, TypeScript, Redux, Redux-Saga**, and **Styled Components**. I have experience in **RESTful API** integration, component-based architecture, and turning design systems into user-friendly interfaces.

At Jotform, a company serving over 25 million users, I worked as part of the **Product team**. Within a shared **monorepo** architecture, I contributed to core features of the **No Code App Builder** platform, such as **Push Notification**, **Copilot**, and **User Management**. I was also involved in the development of **Jotform AI Agents** and created dynamic email templates.

In addition to my professional work, I developed personal side projects that **generate passive income** and helped me improve my full-stack web development skills.

Experiences

Hogarth · Frontend Developer
07/2025 - still

Actively involved in global WPP brand projects, focusing on responsive, UI/UX-driven, SEO-compliant web interfaces, localization, and cross-functional team collaboration.

Jotform

· Frontend Developer
08/2023 - 05/2025

At Jotform, I worked in the Product team, where I developed new features and improved existing functionalities on the main platforms using RDS infrastructure. I also played an active role in the Growth team, contributing to the development of landing pages focused on localization and performance optimization for global users.

· Frontend Developer (Part Time)
11/2022 - 07/2023

I worked on improving user experience in Jotform products by fixing UI bugs using HTML, CSS, JavaScript, and React.js.

· Intern Developer
08/2022 - 09/2022

I worked on frontend development and component-based structure in various web projects using React.js, HTML, CSS, and JavaScript.

Gali Medya · Frontend Developer
08/2021 - 10/2021

I developed corporate websites based on WordPress and customized themes and CSS styles.

Freelance Full Stack Developer
From University

I developed many websites using React.js, Next.js, Redux, Redux-Saga, TypeScript, JavaScript, HTML, CSS, PHP, and MySQL. In these projects, I gained experience in RESTful API integration, UI/UX development, database management, project planning and client communication.

Skills

Tech Stack: React.js Next.js Redux Saga Context API JavaScript TypeScript jQuery HTML CSS/SCSS TailwindCSS Styled Components Bootstrap UI Libraries PWA Lighthouse React DevTools Redux DevTools PHP (PDO)

API & Database: RESTful API Integration Axios JSON JWT Postman MySQL PhpMyAdmin

Tools & Deployment: Git / GitHub CI / CD GitHub Actions Unit Test Monorepo RDS NPM ESLint cPanel Vercel Netlify

Workflow: Agile / Scrum Methodology Problem Solving Team Working

Currently Learning: AngularJS Vue.js

Projects

Personal Portfolio

You can review all my experiences, projects, works, skills and blog posts.

yasinakbulut.dev
